

InStore Optima — Session Changes & Deliverables

A summary of everything built, fixed, and documented during this development session.
Share this with your team so everyone knows what changed and where to find each file.

1. Interview Preparation Guide

File: InStoreOptima_Interview_Guide_v3.docx

A complete role-based interview preparation document covering every team member individually. Each person's section explains every file they built, how it works technically, step-by-step code walkthroughs, and a full set of interview Q&A boxes.

What's inside:

Section	Content
Uma Shankar	axiosClient interceptors, AuthContext, ThemeContext, App.jsx routing, TopNavbar, InnerLayout, all 6 shared components, Login, Register, Dashboard — full technical explanation of every file
Archana	userService.js, Users page, AuditLogs page — including why audit logs are read-only
Abdul	productsService, stockService, stockMovementService, Products CRUD, Stock low-stock highlighting, StockMovement badges — including the capital-letter URL fix
Lekha	supplierService, replenishmentService, purchaseOrderService, Suppliers page, Replenishment approve/reject workflow, PurchaseOrders — including why PATCH not PUT
Pruthvi	ordersService, orderItemsService, paymentService, Orders Offcanvas feature, OrderItems filter, Payments — including why Payment has no amount field

Section	Content
Santosh	invoiceService, receiptService, Invoices overdue detection, Receipts print feature — including window.print() and @media print explanation
React Concepts	useState, useEffect, Rules of Hooks, Props vs State, Context API, Controlled components, List rendering, Axios response shape — every core concept explained with code examples
Git Workflow	Branch strategy, daily sync routine, commit convention, merge vs rebase, what to do on conflict

Who is this for: Every team member before their project interview or viva.

2. System Flow Document

File: InStoreOptima_System_Flow.docx

A plain-English explanation of the complete InStore Optima workflow from beginning to end, with role breakdowns. Written so anyone — technical or non-technical — can understand how the system works.

What's inside:

- The Big Picture — what InStore Optima does in simple words
- 10 step cards covering the complete flow from Admin setup to cycle repeating
- Each step card shows: who does it, what they do, and what happens next
- Individual role breakdowns — what Admin, Manager, and Staff can and cannot do
- Quick reference table — all actions vs all roles with ✓ / X
- One-line summary of the entire flow

The complete flow in one line:

Admin sets up → Staff records stock → Staff creates orders → Payment collected → Invoice and Receipt generated → Stock drops → System auto-generates replenishment → Manager approves → Purchase Order sent to supplier → Supplier delivers → Stock restored → Cycle repeats.

Who is this for: All team members, client presentations, and interview explanations.

3. System Flow Diagram

Format: Interactive SVG diagram (shown in chat)

A colour-coded vertical flowchart showing all 11 steps with role indicators, the decision diamond for the stock check, the rejected branch, the cycle-repeats arrow, and role labels on every step.

Colour legend:

- Purple → Admin steps
- Teal → Manager steps
- Blue → Staff steps
- Gray → Automatic (system) steps

Who is this for: Visual learners, presentations, team onboarding.

4. Landing Page — Final Version

File: LandingPage_Final.jsx

Save to: src/pages/LandingPage.jsx

A futuristic dark landing page that appears before the login page. Built by combining the best elements from 5 design versions explored during this session.

What was taken from each version:

Version	What was taken
V1	Animated particle grid canvas, grid overlay, scanning light, radial glows, hero entrance animations, scroll-triggered stat counters
V2	Split hero layout, live terminal on the right that types real system commands with colour-coded output
V3	Massive Bebas Neue headline (SHELF / PERFECT. / ALWAYS.), live event ticker scrolling real-time store events, bold editorial section headings, numbered feature cards

Features:

- Animated particle grid background with connecting lines that drift
- Scanning line sweeping down the hero on loop
- Split hero — left side has the headline + CTAs, right side has a terminal that types live
- Live ticker scrolling real store events (stock replenished, order completed, payment received, etc.)
- Scroll-triggered animated counters — 14 modules, 3 role levels, 100% auto replenishment, 0 stockouts
- Six feature cards that fade in on scroll
- Bold CTA section with ghost text background
- Responsive — right terminal hides on mobile

Fonts used: Bebas Neue (headlines) + Syne (body) + DM Mono (code/labels)

5. How to Add the Landing Page to the Project

Step 1 — Save the file

```
src/pages/LandingPage.jsx
```

Step 2 — Add import in App.jsx

```
import LandingPage from './pages/LandingPage'
```

Step 3 — Remove the old root redirect

```
// DELETE this line:  
<Route path="/" element={<Navigate to="/login" />} />
```

Step 4 — Add the new route (outside any layout wrapper)

```
<Route path="/" element={<LandingPage />} />  
<Route path="/login" element={<Login />} />  
<Route path="/register" element={<Register />} />
```

Step 5 — Check RequireAuth.jsx

```
// Make sure this redirects to /login not /  
if (!user) return <Navigate to="/login" />
```

Step 6 — Run the server

```
npm run dev
```

Expected URLs after change:

URL	Page
localhost:5173/	Landing page
localhost:5173/login	Login
localhost:5173/register	Register
localhost:5173/dashboard (logged in)	Dashboard
localhost:5173/dashboard (not logged in)	Redirects to /login

6. Files Delivered This Session

File	Type	Purpose
InStoreOptima_Interview_Guide_v3.docx	Word document	Role-based interview prep for all 6 team members
InStoreOptima_System_Flow.docx	Word document	Plain-English system flow + role breakdown
LandingPage_Final.jsx	React component	Final landing page combining V1 + V2 + V3
CHANGES_README.md	This file	Summary of everything done this session

7. Quick Reference — Who Built What (Frontend)

Member	Branch	Files
Uma Shankar	foundation/setup	App.jsx, axiosClient, AuthContext, ThemeContext, layouts, shared components, Login, Register, Dashboard, index.css
Archana	foundation/users-audit	Users.jsx, AuditLogs.jsx, userService.js
Abdul	frontend/stock-products	Products.jsx, Stock.jsx, StockMovement.jsx + 3 service files
Lekha	frontend/supplier-po	Suppliers.jsx, Replenishment.jsx, PurchaseOrders.jsx + 3 service files
Pruthvi	frontend/orders-payment	Orders.jsx, OrderItems.jsx, Payments.jsx + 3 service files
Santosh	frontend/invoice-receipt	Invoices.jsx, Receipts.jsx + 2 service files

8. Known API Quirks (Important for Everyone)

These are backend-specific issues discovered and fixed during development. Keep these in mind.

Issue	Correct URL / Fix
StockMovement URL is case-sensitive	/api/StockMovement — capital S and M
Replenishment uses PATCH not PUT	axiosClient.patch() — using PUT returns 405
Replenishment sub-routes	/api/Replenishment/orders and /api/Replenishment/rules
PurchaseOrder URL is case-sensitive	/api/PurchaseOrder — capital P and O
Payment has no amount field	Cross-reference with Orders to get totalAmount

Issue	Correct URL / Fix
Invoice URL is singular	/api/invoice not /api/invoices
Revenue calculation	Filter orders by completed payment IDs, then sum totalAmount
