

InStore Optima — Development Changelog

Branch: dev1 | **Period:** May 2026

Purchase Orders & GRN

- Removed dark GRN popup — replaced with inline success banner after "Mark as Delivered"
- Print GRN button opens a clean print window directly from the table row
- Added **DELETE** for Purchase Orders (Admin only) — blocked if status is `Delivered`
- Deleting/Cancelling a PO reverts the linked `ReplenishmentOrder` back to `Approved`

Replenishment

- Added **DELETE** for replenishment orders (Admin/Manager)
- Fixed `updateRule` service — was using `PATCH`, now correctly uses `PUT`
- Fixed confirm modal grammar: "approve" / "reject" (was "approved" / "rejected")
- Delete blocked if a linked `PurchaseOrder` exists (409 response)

Delete with Undo Toast (All Pages)

- Built `useUndoDelete.jsx` hook — shared across all pages
- **6-second countdown** toast — item removed from UI instantly
- **Undo** button — cancels delete, reloads from server
- **Delete Now** button — fires immediately if you're sure
- Toast renders via `ReactDOM.createPortal` into `document.body` — always visible, never scrolls off
- Applied to: Products, Suppliers, Users, Stock, StockMovement, Payments, Replenishment, Orders, PurchaseOrders

Stock & Stock Movement

- Added **delete button** for Stock (Admin only)
- Added **delete endpoint** for StockMovement (Admin only)
- When a stock record is deleted → auto-creates a `WRITE_OFF` StockMovement entry
- Added `WRITE_OFF` as a movement type (Expiry, damage or loss)
- `StockMovementRepository.CreateAsync` now correctly updates stock for all types:
 - `IN` → adds to stock
 - `OUT` / `WRITE_OFF` → deducts from stock (min 0)
 - `ADJUSTMENT` → sets stock to exact absolute value
- Auto-creates a stock record if none exists when a movement is recorded

Payments

- Added **delete button** (Admin only)
- Deleting a payment **cascades**: deletes linked Receipt → Invoice too

Audit Logs

- Added **Export CSV** button — exports currently visible/filtered rows
- Downloads as `audit-logs-YYYY-MM-DD.csv` with columns: #, Timestamp, User, Role, Action, Entity, Entity ID, Description
- Audit logs are intentionally **non-deletable** (immutable compliance records)
- Fixed dark theme — undefined CSS variables replaced with correct tokens
- Added search by `auditLogId` and `entityId`

Users

- Fixed **"Joined" column empty** — `AuthResponseDto` now includes `CreatedAt`
- **Deleted users auto-logged out within 2 seconds** via heartbeat polling `GET /api/auth/ping`
- `InactiveUserMiddleware` — checks every authenticated request, returns 401 if user is Inactive
- Deleted user login blocked: "This account has been deactivated. Please contact an administrator."

Role-Based Access

- `RequireRole` now renders an `AccessDenied` component (lock icon + message) instead of silently redirecting
- Sidebar shows locked links with  icon for inaccessible sections
- Staff sees: "This section requires Manager access or higher"
- Manager sees: "Admin Only"

Orders

- Order items dropdown **filters out-of-stock products** — shows only `currentStock > 0`
- Stock count shown in dropdown: Product Name – ₹Price (Stock: X)
- **Completed/Cancelled orders are locked** — Add Item button shows tooltip + warning toast on hover/click, edit/delete buttons disabled with tooltip
- Deleting an order **restores stock** for all items + creates `IN StockMovement` per item
- Auto-creates stock record if product has no stock entry

FK Protection on Delete (All Pages)

- Products/Suppliers: blocked if referenced by orders/movements (409)
- Orders: blocked if has linked Payments or Invoices
- Replenishment Orders: blocked if has a linked Purchase Order
- Purchase Orders: blocked if status is `Delivered`
- All pages show a **red toast with the exact backend reason** when deletion is blocked
- `useUndoDelete` catches errors → restores the row + shows error toast
- `GlobalExceptionHandlerMiddleware` catches `DbUpdateException` (FK violations) → returns 409

Full Cascade Logic

Action	Cascade Effect
Delete Order	Restores stock for all items, creates <code>IN</code> movements
Delete OrderItem	Restores stock, creates <code>IN</code> movement
Delete Payment	Deletes Receipt → deletes Invoice
Delete Stock	Creates <code>WRITE_OFF</code> movement
Cancel / Delete PO	Reverts ReplenishmentOrder → <code>Approved</code>
PO marked Delivered	Updates stock, ReplenishmentOrder → <code>Fulfilled</code> , creates <code>IN</code> movement
Delete Product	Cascades: Stock records + ReplenishmentRules removed

Landing Page

- Built full landing page at `/` with hero, live terminal monitor, stats, features, CTA sections
- **Dark/Light theme toggle** — orange as primary (light), cyan as secondary accent
- **Live terminal monitor** — fetches real data from `GET /api/live/snapshot` (no auth required)
 - Shows: active users, total products, low stock items, pending replenishment, today's orders/revenue, last approved PO
 - Falls back to demo data if backend is offline
- Navbar font: **Outfit** (professional SaaS font)
- Theme persisted via `ThemeContext` — synced across Landing, Login, Register, and full app
- "ALWAYS." text — light grey in dark mode, cyan in light mode
- Particle canvas colour matches active theme (cyan dark / orange light)

Login & Register

- Added ← **Home** button (top-right, grouped with theme toggle) navigates to `/`
- Theme toggle icon unified to 🌞 / 🌙 emoji across all pages

- Fixed: theme toggle button inside `<form>` was missing `type="button"` — was submitting form on every click (caused theme "delay")
- Fixed: validation errors now show field-level messages from backend (e.g. "Password must contain uppercase...")
- Register card padding fix — no longer overlaps with Home button at 100% browser zoom

Theme & UI

- Dark mode logo brightness boosted (`brightness(1.8)` `contrast(1.1)`) on login page + top navbar
- Dropdown option text visible in both dark and light themes
- All pages share one `ThemeContext` — no more out-of-sync themes between pages

Frontend Validation (`src/utls/validators.js`)

Field	Rule
Name (Register)	Letters, spaces, hyphens only — no numbers
Product Name	Must contain a letter, not numbers-only
Product Description	Must contain a letter if provided
Min / Max Stock	Minimum value of 1 (0 not allowed)
Supplier Name	Letters, spaces, hyphens only
Contact Person	Letters only — no numbers or special characters
Stock Movement Reason	No digits allowed

Search by ID (All Pages)

Added ID-based search to: Suppliers, Users, Products, StockMovement, Stock, Replenishment, Payments (paymentId + orderId), AuditLogs (auditLogId + entityId)

Backend Architecture

Addition	Purpose
LiveController	Public endpoint — returns system snapshot for landing page terminal
InactiveUserMiddleware	Intercepts every authenticated request — kicks out deactivated users (401)
GlobalExceptionHandlerMiddleware	Catches DbUpdateException FK violations → returns 409 with message
InvalidOperationException pattern	Repositories throw this for FK conflicts; controllers catch and rethrow as ConflictException (409) — avoids circular layer dependency
TriggerReplenishmentIfNeededAsync	Falls back to Product.MinStock if no active rule exists — auto-replenishment works for all products
GET /api/auth/ping	Heartbeat endpoint — frontend polls every 2s to detect deactivated accounts
